Instructions: Answer each question as thoroughly as possible. Round answers to 4 decimal places as needed. Exact answers are best when possible. Be sure to answer all parts of each question.

1. Explain what is wrong with the graph below. There are at least three problems.

2. Use the contingency table below to answer the probability questions that follow.

	Нарру	Unhappy
Developers	5	13
Mathematicians	7	10

- a. What is the probability that someone selected randomly from this sample is a developer?
- b. What is the probability that someone selected randomly from this sample is happy?
- c. What is the probability that someone selected randomly from this sample is a happy developer?
- d. What is the probability that someone selected randomly from this sample is a developer or is happy?
- e. What is the probability that someone selected randomly from this sample is a developer given that they are happy?

f.	Are happiness and being a developer independent events? Explain your reasoning. Show math to support your conclusion.
	mutil to support your conclusion.

3. A particular rare disease occurs in just 3 out of 1000 people in population. A test for that disease correctly identifies those with the disease 99% of the time. For people without the disease, the test correctly identifies that they do not have the disease 99.5% of the time. If a patient tests positive for the disease, what is the probability that they actually have the disease?
